

INTELLECTUAL FRAMEWORK

To allow over 65s to understand and communicate with each other in various parts of the world, English will be the bridging language that, like Esperanto, will unite all the elderly involved in the project.

The Montessori method will be used both as a theoretical level for teachers and practical in the EnForSe corner station. They will become the place to learn English with the Montessori method and at the same time an experimental approach to the Montessori method in communicating English teaching.

We could create places where different people experience English in communication by talking to other people from other countries.

The main idea is to create an operational communication center in each individual partner, that is a workstation or room where there is a place where events for seniors will be organized and thanks to which they will comment and discuss culture, cuisine, music of the art of their country or will ask for information about the other.

Low impact for us as an expense and also for Europe, while potentially very high impact because places are created where European culture is practically widespread which could then also turn into small cultural events of the EnForSe day (cine-forum with films from other countries day songs, music or food ...).
